

## ABSTRACT

Disclosed is a novel compound suitable as an electron transporting material for organic electronic devices.

5 Also disclosed is an organic electronic device using such a compound which has higher sensitivity and longer life than conventional organic electronic devices.

Specifically disclosed is a compound having a structure wherein structural units represented by the general

10 formula (1) below are bonded to one another without a linking group,

(1)

wherein, in the formula,  $X_1$  to  $X_4$  independently represent an oxygen atom, a sulfur atom or  $NR_0$  (wherein  $R_0$  represents  
 15 a hydrogen atom, or a substituted or unsubstituted monovalent organic group);  $Z_0$  represents a tetravalent organic group; and \* represents a bonding position.
